

Windows Installation on Apple silicon-based Mac.

Chapter 1 Virtualization

Installation is quick and windows runs faster when this option is chosen in UTM however x86 or x64 based application like PSoC creator will not run in this case.

- Simply follow the link below to install win 11 in virtualization.
- <https://docs.getutm.app/guides/windows/#crystalfetch>
- Download image from CrystalFetch with the settings below:

Note that architecture selected is Apple silicon.

Note: never eject the drives else shared folder will not work.

Chapter 2 Emulation

Installation and windows will run slow however when this option is chosen in UTM x86 or x64 based application like PSoC creator will run in this case.

- Simply follow the instruction in the video tutorial as in link below:
- <https://youtu.be/D00iaBXOe00>
