

# Cypress WirelessUSB™ Listener Tool

## Getting Started Guide

### Purpose

The purpose of this document is to assist in getting the Cypress WirelessUSB™ Listener Tool up and running.

### Components

The WirelessUSB Listener Tool consists of the Listener Tool hardware, the Listener Tool software (ListenLS.exe), the help file (ListenLS.chm), the device driver (CYUSB.sys and CYUSB.inf), and the Getting Started Guide (this file).

### Supported Platforms

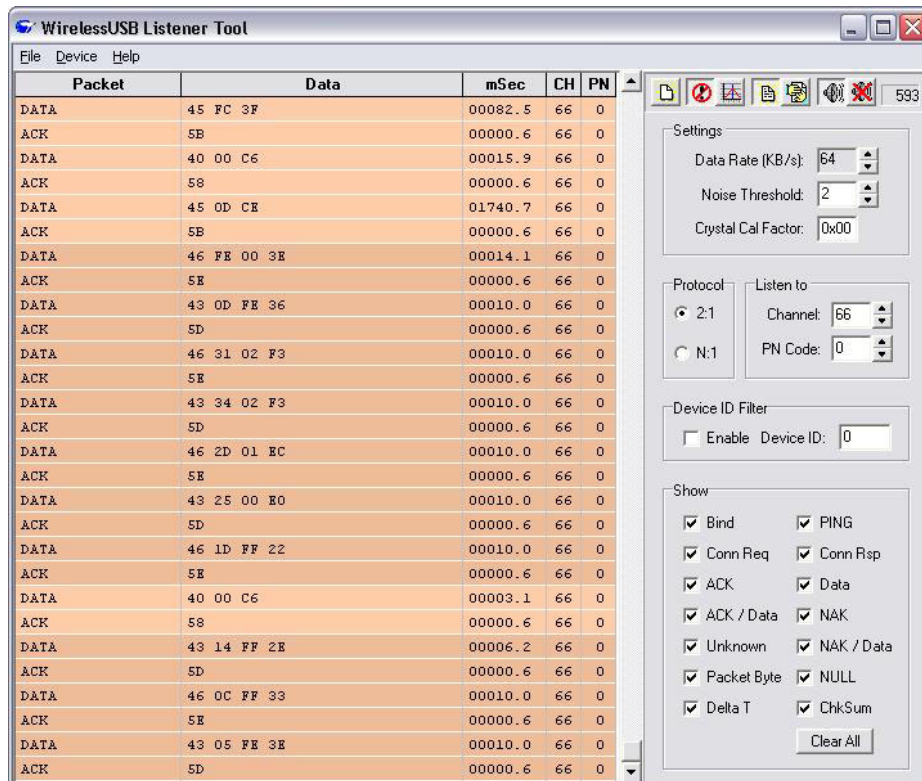

The Cypress WirelessUSB Listener Tool has been tested and is supported on Windows XP Professional and Home Editions, and Windows 2000 Professional. The utility is not supported on Windows Millennium Edition or Windows 98. The utility will not work with Windows 95 or any version of Windows NT.

### Installation

The utility may be installed locally by copying the entire software directory (Listener Tool) to the desired location on the host PC. Once copied, the directory may be renamed. Alternatively, the software may be run directly from the distribution media.

### Getting Started

- Start the Cypress WirelessUSB Listener Tool by double-clicking the Listener Tool software (ListenLS.exe). The application window is shown below

- Connect the Listener Tool hardware to a USB port on your PC, and follow the instructions in the Listener Tool help for installing the driver. The Listener Tool help can be accessed by selecting WirelessUSB Listener Tool under the Help menu in the Listener Tool software. The Listener Tool hardware is shown below.

- Refer to the Listener help for further information on using the WirelessUSB Listener Tool.

WirelessUSB is a trademark of Cypress Semiconductor.
